Operator Related Problems

(Total 15 questions)

SL		Problem statement	Difficulty levels
1.	-14 % 3 = -2	numbers X and Y as inputs, then calculate and print the values of multiplication, division (quotient and reminder).	
	-14 % -3 = -2	Sample output	
	5 10	Addition: 15 Subtraction: -5 Multiplication: 50	
		Quotient : 0 Reminder: 5	
	-5 10.5	Addition: 5.5 Subtraction: -15.5 Multiplication: -52.5 Quotient: 0 Reminder: -48	
2.	-	te the circumference of a circle having radius r. Area, A = 2 * Pi * r	*
2.	Program that will calculate Sample input (r)	Area, A = 2 * Pi * r Sample output	*
2.	Sample input (r)	Area, A = 2 * Pi * r	*
2.	Sample input (r) 5 10.5 Program that will take tw (Without using math.h)	Area, A = 2 * Pi * r Sample output Area: 31.4	*
	Sample input (r) 5 10.5 Program that will take tw (Without using math.h)	Area, A = 2 * Pi * r Sample output Area: 31.4 Area: 65.94 vo numbers (a, b) as inputs and compute the value of the equation –	*
	Sample input (r) 5 10.5 Program that will take tw (Without using math.h) X =	Area, A = 2 * Pi * r Sample output Area: 31.4 Area: 65.94 To numbers (a, b) as inputs and compute the value of the equation – $= (3.31 * a^2 + 2.01 * b^3) / (7.16 * b^2 + 2.01 * a^3)$	*

4.	Program that will increment and decrement a number X by 1 inside the <i>printf</i> function. (Use	**
	LL and appreture)	

Sample input(X,Y) Sample output	Sample input(X)		Sample output	
X:5	5		X++: 5	
-X : 4 -5 X++: -5 ++X: -4 X: -5 -X : -6 Program that will increment and decrement a number X by Y. (Use += and -= operators) * Sample input(X,Y) 5 10 Incremented Value: 10 Decremented Value: -5 -5 5 Incremented Value: -0 Decremented Value: -10 Program that will multiply and divide a number X by Y. (Use *= and /= operators) * * Sample input(X,Y) Sample output 56 10 Multiplication: 560 Division: 5 -56 -10 Multiplication: 560 Division: 5 Program that will declare and initialize an integer and a floating point number. Then it will perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input Sample output -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000			++X: 6	
Program that will increment and decrement a number X by Y. (Use += and -= operators) Sample input(X,Y) Sample output 10				
++X: -4 X: -5 -X: -6			X : 4	
Program that will increment and decrement a number X by Y. (Use += and -= operators) * Sample input(X,Y) 5 10 Incremented Value: 10 Decremented Value: -5 -5 5 Incremented Value: -10 Program that will multiply and divide a number X by Y. (Use *= and /= operators) * Sample input(X,Y) Sample output 56 10 Multiplication: 560 Division: 5 -56 -10 Multiplication: 560 Division: 5 Program that will declare and initialize an integer and a floating point number. Then it will perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input Sample output -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000	-5			
Program that will increment and decrement a number X by Y. (Use += and -= operators) Sample input(X,Y)				
Program that will increment and decrement a number X by Y. (Use += and -= operators) Sample input(X,Y) Sample output Incremented Value: 10 Decremented Value: -5 Incremented Value: 0 Decremented Value: -10 Program that will multiply and divide a number X by Y. (Use *= and /= operators) * Sample input(X,Y) Sample output 56 10 Multiplication: 560 Division: 5 -56 -10 Multiplication: 560 Division: 5 Program that will declare and initialize an integer and a floating point number. Then it will perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input Sample output -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000				
Sample input(X,Y) 5 10 Incremented Value: 10 Decremented Value: -5 -5 5 Incremented Value: 0 Decremented Value: -10 Program that will multiply and divide a number X by Y. (Use *= and /= operators) * Sample input(X,Y) Sample output 56 10 Multiplication: 560 Division: 5 -56 -10 Multiplication: 560 Division: 5 Program that will declare and initialize an integer and a floating point number. Then it will perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input Sample output -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000			X : -6	
Incremented Value: 10 Decremented Value: -5 Decremented Value: -5 Incremented Value: -5 Decremented Value: -10 Decremented Value: -10 Decremented Value: -10 Program that will multiply and divide a number X by Y. (Use *= and /= operators) * Sample input(X,Y)	Program that will inc	rement and decremen	t a number X by Y . (Use += and -= operators)	*
Decremented Value: -5	Sample input(X,Y)		Sample output	
Decremented Value: -5			Incremented Value: 10	
Program that will multiply and divide a number X by Y. (Use *= and /= operators) * Sample input(X,Y) 56 10				
Program that will multiply and divide a number X by Y. (Use *= and /= operators) * Sample input(X,Y) 56 10	-5 5			
Program that will multiply and divide a number X by Y. (Use *= and /= operators) * Sample input(X,Y) Sample output 56 10				
Sample input(X,Y) Sample output				
Multiplication: 560 -56 -10	Program that will mu	Itiply and divide a nun	nber X by Y . (Use *= and /= operators)	*
Program that will declare and initialize an integer and a floating point number. Then it will perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input Sample output -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000	Sample input(X,Y)		Sample output	
-56 -10 Multiplication: 560 Division: 5 Program that will declare and initialize an integer and a floating point number. Then it will perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.0000000 Type Casting: (float) -150 produces -150.000000	56 10		Multiplication: 560	
Program that will declare and initialize an integer and a floating point number. Then it will perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000			Division: 5	
Program that will declare and initialize an integer and a floating point number. Then it will perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000	-56 -10		Multiplication: 560	
perform floating to integer and integer to floating conversions using (a) Assignment operation (b) Type casting Sample input -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000			Division: 5	
(a) Assignment operation (b) Type casting Sample input -150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000				* *
-150 123.125 Assignment: 123.125000 assigned to an int produces 123 Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000	(a) Assignment o		loating conversions using	
Assignment: -150 assigned to a float produces -150.000000 Type Casting: (float) -150 produces -150.000000	Sample input	Sample output		
Type Casting: (float) -150 produces -150.000000	-150 123.125	_	- · · · · · · · · · · · · · · · · · · ·	
		_	=	
Type Casting: (int) 123.125 produces -123				
		Type Casting: (int)	123.125 produces -123	

8.	Program that will take two num conditional operator - ?)	bers as inputs and print the maximum value. (Using	**
	Sample input (x, y)	Sample output	
	20 100	Max: 100	
1	50 00	14 50	

	50 -20	Max: 50	
).	Program that will evaluate the foll		*
		X = a - b / 3 + c * 2 - 1	
	\	′ = a - (b / (3 + c) * 2) - 1	
		Z = a - ((b / 3) + c * 2) - 1	
	Sample input (a, b, c)	Sample output	
	9 12 3	X = 10	
		Y = 4	
		Z = -1	
		<u> </u>	
10.	Program that will take a , b & c as i	nputs and decide if the statements are True	(1) of False (0) **
		a)	
		b)	
		c)	
		C)	
	Sample input (a, b, c)	Sample output	
	10 -10 0	a) 1	
		b) 0	
		c) 1	
11.	Program that will take a , b & c as i	nputs and decide if the statements are True	(1) of False (0) ***
		1)	
		2)	
		3)	
	Sample input (a, b, c)	Sample output	
	10 -10 0	1) 0	
		2) 1	
		3) 1	
		J 5, 1	

Program that will take calculate the roots of a quadratic equation $(a.x^2 + b.x + c = 0)$ from the formula, (here, dot (.) stands for multiplication) -				
Cample input (a. h. a)	Sample output			
Sample input (a, b, c)	Sample Satpat			
2 4 -16	2.00 -4.00			

		; where 1<= x <=180 [No checking needed]	
	Sample input (x)	Sample output	
	30	1.810066	
	120	0.778151	
	180	3.954243	
14.	_	loating point number X as input and evaluate A,B,C where-lue when X is rounded up to the nearest integer	**
	B = Val	lue when X is rounded down to the nearest integer solute value of X	
	Sample input(X)	Sample output	
	10.6	A = 11, B = 10, C = 10.6	
	-77.9	A = 78, B = 77, C = 77.9	_
15.	Program to find size of int, float, double and char of the system.		
	Sample input	Sample output	
		Size of int in byte(s) = 4	
		Size of float in byte(s) = 4	
	II .	Size of double in byte(s) = 8	1 1
